Dear Colleagues,

I am writing to encourage any senior graduate students in your group interested in a postdoc to contact me. I have two openings.

* I currently have one postdoc opening with research focusing on gravitational and cosmological analogous in 2D BECs (of 39K and 87Rb). The ideal start date would be the start of June, and certainly before the end of August.

* A second opening focuses on using BECs as a prototype open quantum system subject to periodic weak measurement and classical feedback.

Many thanks,

-- Ian
